PRESSEINFORMATION

1 Focus on overall sustainability: 2 greenValue GmbH

3
4 **greenValue is committed to the implementation of**
5 **sustainable projects in the field of renewable energies.**
6 **Besides that, the company is ahead of its time as concerns**
7 **internal processes, all of which have already been digitized,**
8 **as the Managing Director Kellermann focuses on**
9 **sustainability down to the last detail.**

10
11 The world is changing, and the tasks are more urgent than ever: we
12 need to put an end to the dependence on fossil fuels, save
13 resources and protect habitats. That's the only way to put a modern
14 society on a sustainable and future-orientated path. The objectives
15 of the German government for a sustainable energy supply with
16 reduced CO2 emissions are ambitious. For example, the share of
17 renewable energy in power production should be increased to 80%
18 by 2030. The National Hydrogen Strategy will establish green
19 hydrogen as an alternative energy source, which is another
20 important pillar for a sustainable energy supply.

21
22 There is quite a lot of challenges for today's economy. „We're
23 proud of having pushed energy transition through our projects for
24 the last 20 years“, says Daniel Kellermann, Founder and Managing
25 Director of greenValue GmbH. „The leading role of sustainability is
26 not limited to the selection of projects in the field of renewable
27 energies. By almost completely digitizing our office, the paper
28 consumption was reduced by approximately 98 percent within four

29 years. The Sustainability report in its second edition which
30 highlights the main aspects of the measures taken by greenValue in
31 this field can be considered as exemplary. A guideline that certainly
32 would apply to other companies. „By moving to downtown
33 Nuremberg, the office is easily to reach by public transport”,
34 Kellermann adds. „The combination of remote working and office
35 work makes contemporary working possible, to the advantage of
36 our employees, young and skilled professionals. We offer those
37 interested a diversified working place with continuous growth that
38 offers the staff the opportunity to take an active part in the shaping
39 the future of a sustainable energy.”

40
41 As an Information and Consulting company, greenValue fulfills
42 contract initiation and negotiation services. Furthermore,
43 greenValue takes responsibility for process coordination during
44 project implementation and acts as a link between investors and
45 project planners. „Right now, we are conducting three *ground-*
46 *breaking* projects. In the framework of a Real Lab for the Energy
47 Transition, we were able to bring forward a project for our partner
48 in which green hydrogen is generated by wind power. An existing
49 natural gas pipeline will be rededicated to hydrogen transport to
50 enable the industrial use of hydrogen. Another exciting project is
51 our participation in the development of a plant to liquefy bio
52 natural gas that uses differences in pressure in the gas grid to
53 generate electricity and utilizes waste heat. Furthermore, we are
54 involved in sub-projects for the generation of biogas or biomethane
55 from the fermentation of biowaste.

56
57 greenValue has implemented a Quality Management System
58 according to DIN EN ISO 9001:2015 to ensure the quality of the
59 services provided. The certification is done yearly, last in
60 September 2022. This certification contributes to professional and
61 transparent cooperation. Therefore, it’s not surprising that
62 greenValue has developed into a reliable partner for utility
63 companies and institutional investors in the recent years. “We are
64 convinced that renewable energies offer solid investment
65 opportunities and play an important role in sustainable
66 development,” Kellermann concludes.

Short bio:

Since its founding in 2002, greenValue GmbH is dedicated with passion to renewable energies. As an Information and Consulting company with a team of five highly-motivated employees, the company offers services like contract initiations and negotiations, coordinates processes during project implementation and acts as a link between investors and project planners. With a longstanding expertise in the field of renewable energies, greenValue focuses on the following segments: wind power, photovoltaic, RNG, biomethane, biowaste, green hydrogen and liquid RNG.

Besides mergers & acquisitions, the range of services greenValue GmbH is covering, also includes project, and asset management, as well as the implementation of energy efficiency and energy production plants. The combination of extensive expertise and more than 20 years of experience is the foundation of the company's sustainable success.
